

----- DEVELOPER INSTALLATION GUIDE -----

Product Name: Data Visualization

Team Name: Visualizing Climate Change

Date: March 21, 2019

Note: Users do not need to install anything. Thus, we have written this document as an installation guide for developers.

1. The master repository that contains all of the code is on <https://github.com/schan54/Data-Visualization>. Once you have git installed via command line, you can make a pull request. (Git instructions can be googled, and are outside the scope of this guide)
2. Our app uses node. You will need to install npm so you can install all of the dependencies and use 'http-server -c-1' to launch our website
